

# COBOL PYBOT

## Notes :-

It is a Python script written using ZOAU that allows you to generate starter COBOL code and corresponding JCL file by using various parameters input by the amazing mainframer.

## Directions:-

Download the Python script titled "CobPyBot.py" from USS home directory in /z/Z00112. When the script is run it will ask for a number of user inputs essential for COBOL code generation like I/O file names, directory in which COBOL and JCL file should be made etc.

The starter code will be generated after completion of script run and you can easily edit the rest of logic as per your requirement.
